## **DETAILED ACTION**

### **EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Friedrich Kueffner on 2/28/2008.

The application has been amended as follows: Page 2 of the specification between the first heading "Background of the Invention" and second heading "Field of the Invention" insert -- Cross-Reference to Related Applications

This application claims priority of Austria Patent Application Serial Number A1487/2002 filed on October 10, 2002. --

Figure 1 of the drawings insert the label -- Prior Art --.

### ***Allowable Subject Matter***

2. The following is an examiner's statement of reasons for allowance: Regarding claim 1, the prior art of record, Baranowski (US Pat# 6,473,630) teaches a storage battery 205 (Fig. 2); a connector socket for receiving a charge plug of an electric connection into a power pack (Col. 3 lines 47-60); at least one miniature loudspeaker (Col. 3 lines 3-12); audio electronics connected to the loudspeaker (Col. 5 lines 19-27); a reception part connected to the audio electronics for receiving wireless signals (Col. 3 lines 20-27); charging electronics 203 (Fig. 2) operative to monitor a charging process

of the storage battery (Col. 4 lines 5-28), the charging electronics having a first contact within the connector socket and contacting the surface areas of the charge plug when the plug is inserted into the connector socket , wherein current is supplied from the power pack to the charging electronics via the first contact when the charge plug is inserted into the connector socket (Col. 3 lines 47-60).

Baranowski (US Pat# 2002/0067825) teaches a contact within the connector socket and contacting the surface areas of a signal plug when the signal plug is inserted into the connector socket, the signal plug being part of an electric connection with an audio device for the transfer of signals (Fig. 1, Sections 0010 and 0020-0023), and the audio device is configured to transmit a stereo signal (Section 0022 points out the signal can be from a cd player, cassette tape player, radio tuner, a television, and etc. which are obvious types of stereo signals and Section 0021 points out the speakers are stereo) from the audio device to at least the one miniature loudspeaker via the contact when the signal plug is inserted into the connector socket (Fig. 1, Sections 0010 and 0020-0023).

Izawa (US Pat Pub# 2001/0013983) teaches a connector socket 6 (Fig. 3) that handles both current and an audio signal (Section 0089 and 0105, a USB (i.e. connector socket) has contacts for both a current and audio signals).

The prior art of record fails to teach wireless headphones, comprising a storage battery; a connector socket for receiving a charge plug of an electric connection into a power pack; at least one miniature loudspeaker; audio electronics connected to the loudspeaker; a reception part connected to the audio electronics for receiving wireless

Art Unit: 2618

signals; charging electronics operative to monitor a charging process of the storage battery, the charging electronics having a first contact within the connector socket and contacting the surface areas of the charge plug when the charge plug is inserted into the connector socket, the audio electronics having a second contact within the connector socket and contacting the surface areas of a signal plug when the signal plug is inserted into the connector socket, the signal plug being part of an electric connection with an audio device for the transfer of signals, wherein current is supplied from the power pack to the charging electronics via the first contact when the charge plug is inserted into the connector socket, and the audio device is configured to transmit a stereo signal from the audio device to at least the one miniature loudspeaker via the second contact when the signal plug is inserted into the connector socket.

Further, the examiner believes the combination of Baranowski '630, Baranowski '825, and Izawa would not be obvious for one of ordinary skill in the art to combine.

Applicant's remarks filed on 1/7/2008 further states reasons for allowance.

The prior art of record fails to teach the claimed subject matter as claimed and substantially connected in claims 1-4.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***
